

Master of Science in Supply Chain Management (Full-Time / Part-Time)

An integrated multi-disciplinary graduate coursework programme on global logistics, business analytics, and industrial systems engineering and management for a career in the logistics and supply chain industry

The NUS Master of Science in Supply Chain Management (MSc (SCM)) programme aims to develop graduates with a comprehensive skillset for planning, designing and managing modern supply chains in Asia with a global context. Graduates will gain exposure to current issues of logistics and supply chain management in a digitalized global economy, and opportunities for in-depth application of business analytics methodologies, such as optimisation, simulation and data analytics, to solve real-world industry problems.

Highlights of NUS MSc (SCM) Programme:

- Top-notch professors from NUS Business School and Faculty of Engineering
- Sharing of insights from industry experts linked with The Logistics Institute – Asia Pacific
- Experiential learning of Global Logistics & Supply Chain Management via Summer School in Europe
- A wide choice of multi-disciplinary modules

We invite you to join us at the online information session for the latest curriculum and fees structure.
